

Dharawal National Park

October 11th 2021

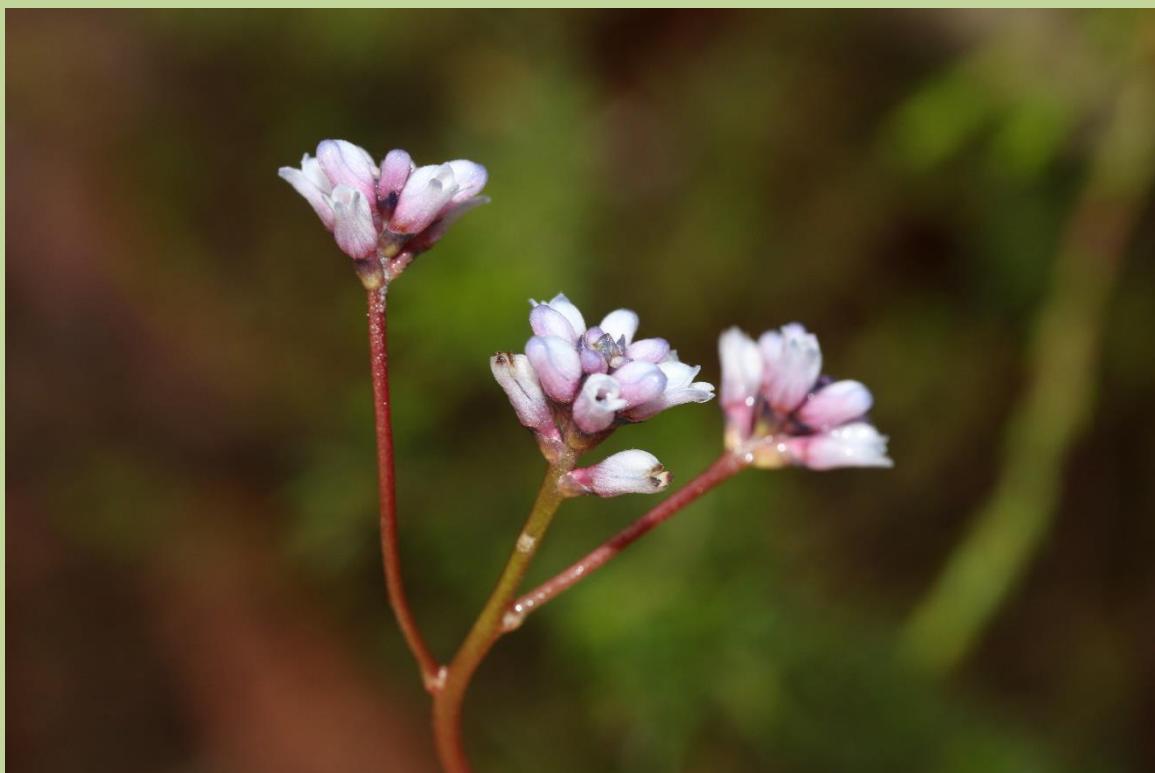

Leptomeria acida

Immediately after breakfast, now that we are able to go beyond our LGA (though within the Greater Sydney region), we escaped south to Dharawal National Park near Darkes Forest. We walked the 10 Fire Trail and the 10A Fire Trail to the east. It is a familiar location, close to home, much-visited, and a quiet corner. While others flock to the shops and hairdressers, we hid in the bush in perfect, happy isolation.

Epacris calvertiana

Conospermum sp.

Caladenia testacea

Stypelia triflora but very pale

Sprengelia incarnata

Lambertia formosa

Xyris sp

Darwinia grandiflora

This one is a prostrate plant.

Telopea speciosissima

Doryanthes excelsa

Ricinocarpus pinifolius

Monotoca scoparia.

Poranthera corymbosa

Gompholobium grandiflorum

Calochilus campestris

The cool – cold, for October – day and the clouds above may have dedicated this space to us but it was truly perfect walking weather.

The wombats agreed
